

# Building Information Modeling and Data Analytics

---

# My Background

Intern with Turner Construction Company

2022 - Operations & Closeout Project Management @ Beth Israel  
Deaconess Hospital, Boston MA

2023 - Virtual Design Construction @ Oakland Office and San  
Francisco International Airport, Oakland CA

# Motivation

As of 2024, the U.S. construction industry is valued at anywhere between 1.57 & 2.1 trillion USD and an CAGR estimate of 5.0% between 2024 and 2028.

Buildings and construction account for 37% of all global carbon emissions & is outpacing decarbonization efforts - technological innovations increase efficiency reducing carbon footprint.

Data Analytics  
Applications

---

01

# Building Technology Systems

---

# Building Blocks: What Makes a Structure a Building?

## Structure

Concrete, steel, timber, etc.

## HVAC

Heating, Ventilation, and  
Air Conditioning

## MEPFP

Mechanical, Electrical,  
Plumbing, & Fire Protection

---

# Structural Elements

Materials like concrete, steel, and timber dominate the structural component of most large buildings

Concrete production accounts for 7% of global emissions, steel 8%

Massive incentives for optimizing steel & concrete usage even with green alternatives available.

# HVAC Elements

HVAC systems work to control the temperature, humidity, air quality, and air circulation in a building.

Air Handling Unit

Variable Air  
Volume Terminal

# Shout Out - Air Handling Unit

# MEPFP Elements

Process Piping

Fire Protection

Mechanical

Electrical

Plumbing

02

# Building Information Modeling (BIM)

---

# What is BIM?

## High Level Overview

- Dynamic, data-intensive model of project compiled from general contractor & subcontractors
- Integration of geometric, scheduling, and budgeting data (4D/5D)
- Complete life cycle management of building

# Geometric Data & 3D Modeling

## Areas of Interest

### Structure

- Steel & Timber Members, Concrete
- Load & Finite Element Analysis

### MEPFP

- Mechanical (HVAC), Electrical, Plumbing, & Fire Protection
- Clash Detection for Project Management

## Modeling Techniques

- CAD (Autodesk Revit, ArchiCAD, AutoCAD)
- 3D Point Cloud Scanning (Autodesk ReCap)

# Computer Aided Design

## Digitally Modeled Elements

- Come to Workshop on 04/09 to learn basic CAD!

Software presents parametric CAD templates for common elements

- HVAC elements like Duct, AHU, and VAV's
- Piping Elements & Hangers

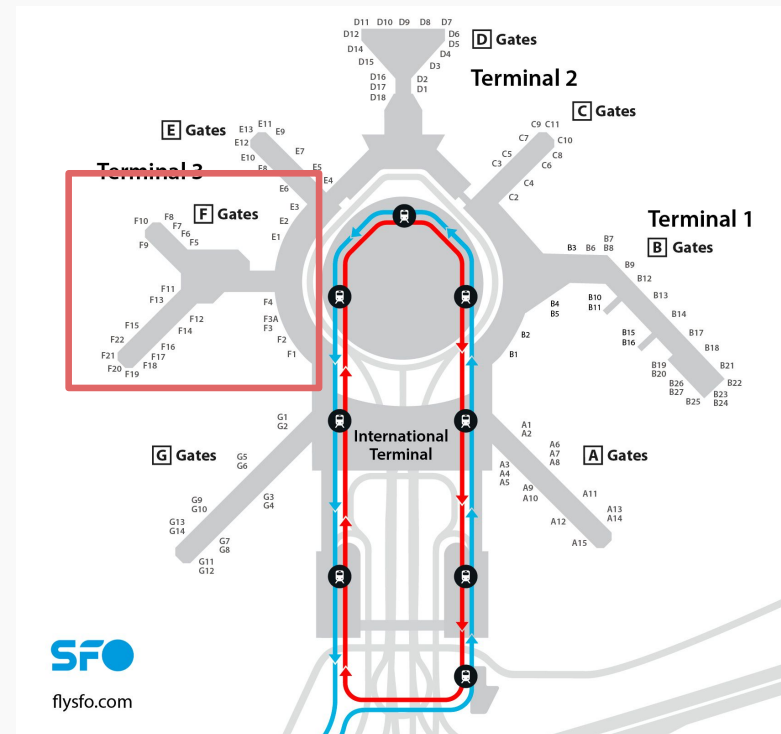

# Point Cloud Scanning

Compile point system defined by  $\varphi$ ,  $\theta$ , &  $r$ , where  $r = c\Delta t$ . Point cloud can be used for comparison to built structure or compiled to CAD with ML processing.

# Integrating CAD & Point Cloud for Project Management

My Experience...

# Finite Element Analysis (FEM & FEA)

- Deconstructs complex parts & assemblies into geometrically favorable subcomponents
  - Tetrahedral, Hexahedral, & Hybrid
- PDE's dictating the mesh & nodal behavior are approximated with linear or ODE systems
  - Displacement, Stress/Strain

# Clash Detection

- Scans project model for intersection components, clearances, and supports
- Assigns responsible contractor for fix to prevent in-field inefficiencies

---

# Data Layering (4D/5D)

## Scheduling Data (4D)

- Assign scheduling date to model elements
- Aesthetic and technical applications to streamline construction process.

## Cost Data (5D)

- Assign cost to model elements
- Greater cost estimate and resource allocation capabilities

## Additional Data

- Management data & sustainability data may be added to further enhance the value of BIM model

03

# Construction Data Analytics

# Timeline of Data Analytics in Construction

## BIM Analytics

Extracting data from a BIM model to gain project insight.

## Optimization Analytics

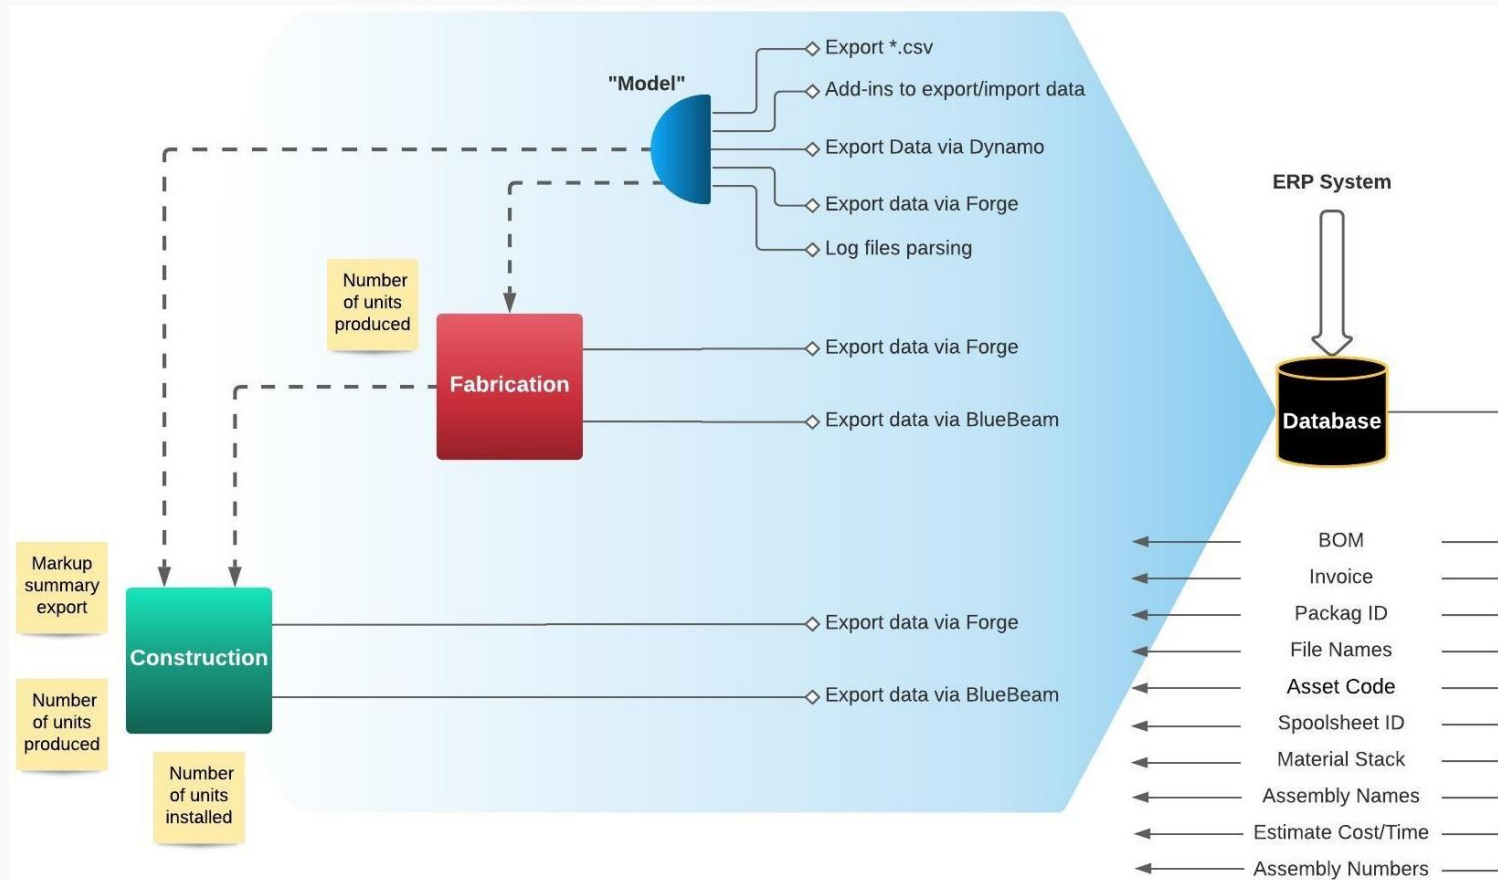

Utilizing machine learning to create sustainable solutions in energy efficiency.

# BIM Analytics

Wow, that's a lot of data... how can data be extracted for useful insights in predictive modeling and optimization?

# Where Does the Data Come From

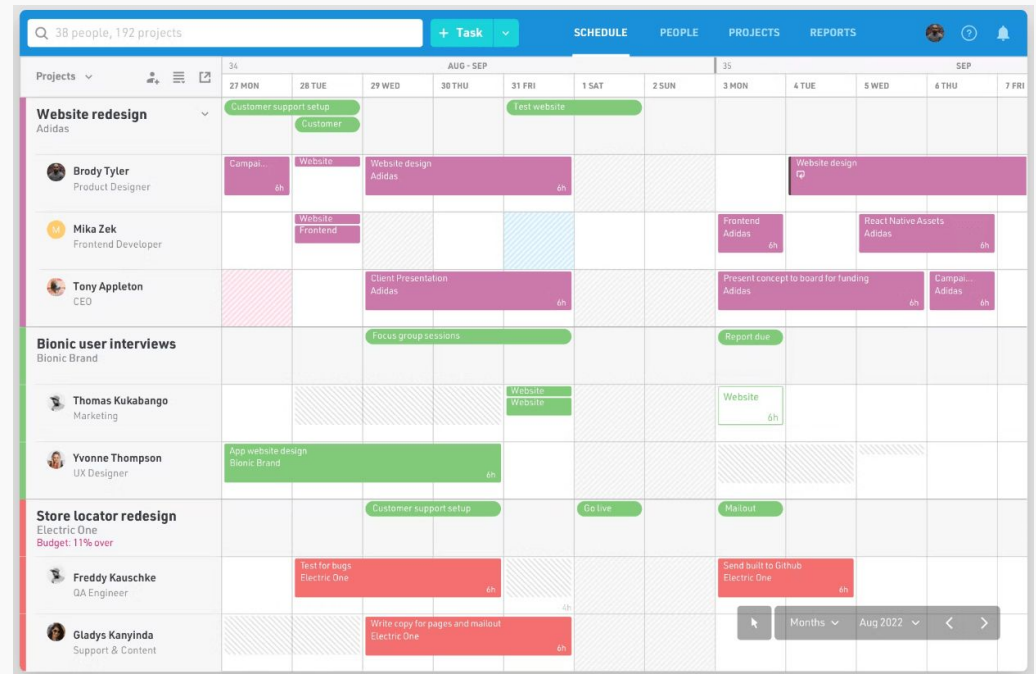

# Optimization Analytics

## Scheduling Optimization

- 3D/ 4D Clash Detection
- RL or ML model simulations for scheduling options

## Cost Optimization

- 4d scheduling, RL & ML model simulations

---

# Energy Optimization

Most energy consumption of a building is in its HVAC system. This load can be optimized with following strategies...

- Demand Based Heating & Cooling
- Zoning Efficiency
- Load Balancing

# Thanks!
